

## Figure comparison for Rund: 4 October 2026

Baseline: your 2 October Overleaf revision, a5d5623. The three composite main figures reproduce byte for byte from your version. Their captions and references have been corrected where necessary. This document shows graphics that changed or were added; the redlines show all caption edits.

### Rainfall: your version

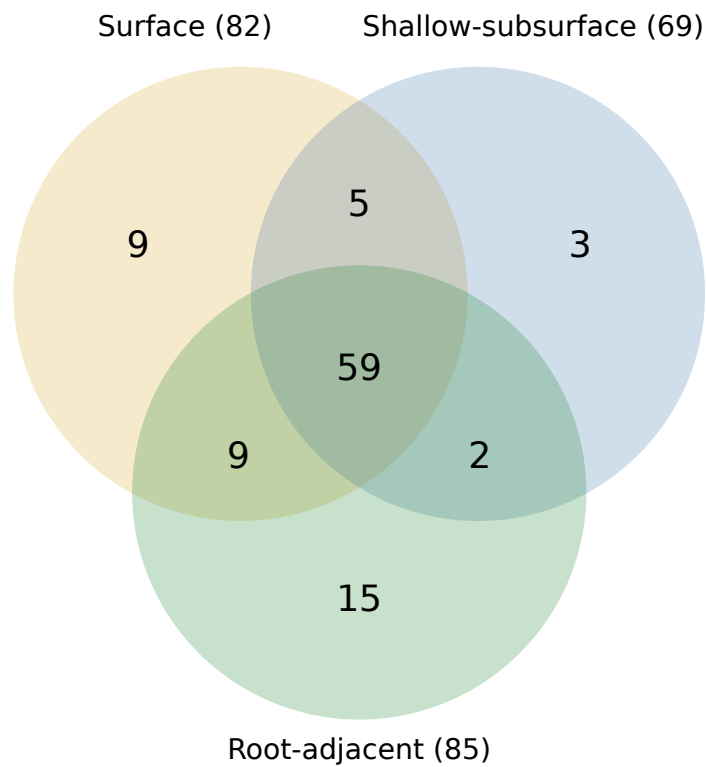

### Rainfall: corrected Site 52 daily series

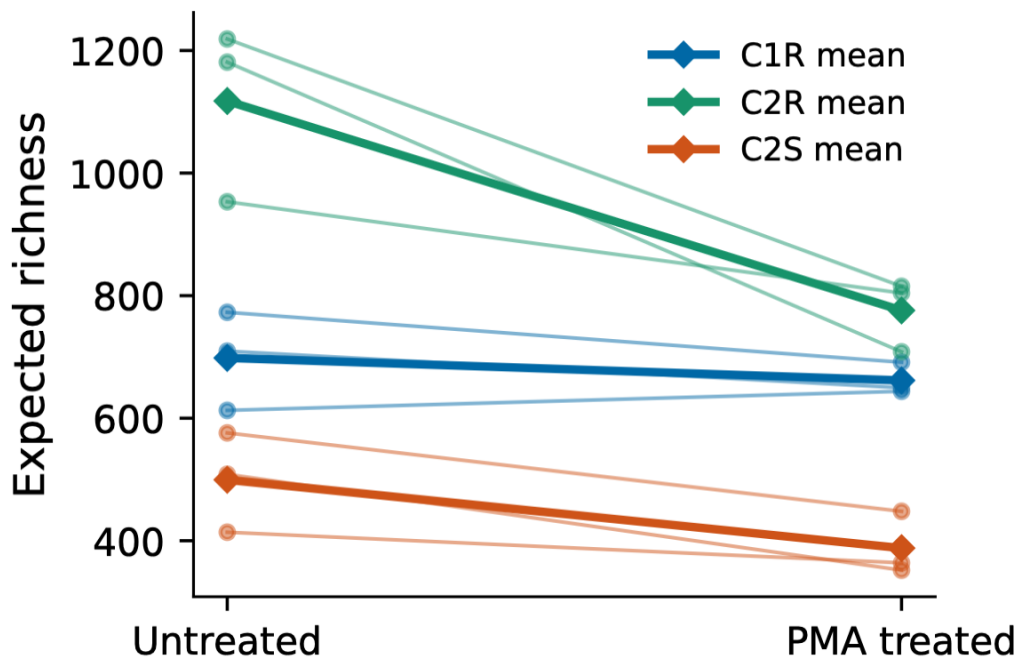

The Open-Meteo richness-selection frequency changes from 73% to 68%; the calendar orbit and bootstrap ranges are updated. Main rounded effect estimates and exact calendar probabilities are unchanged.

## Core-genus overlap: added to replace the TODO

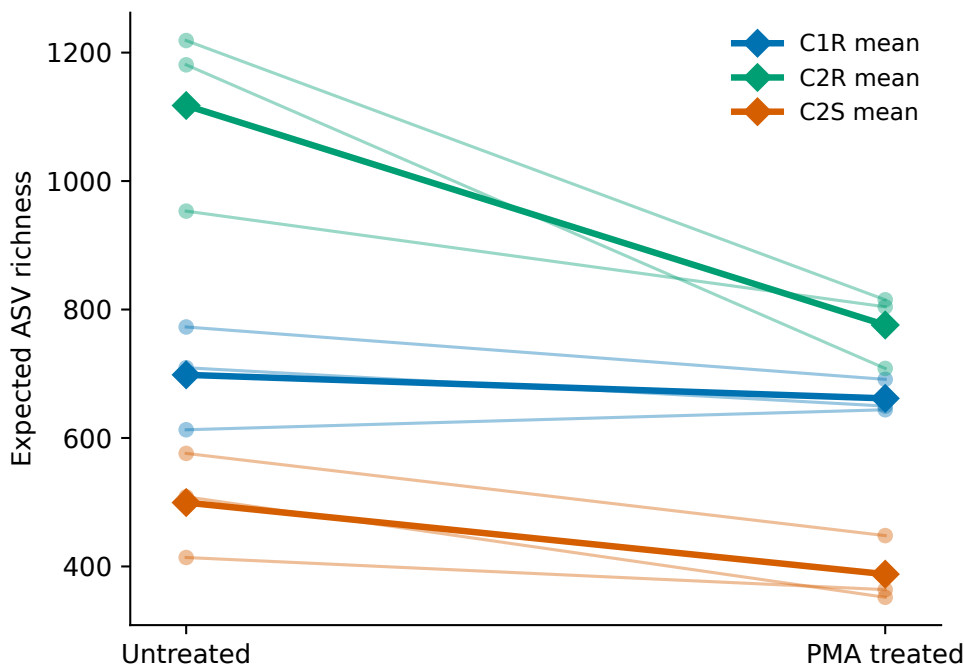

The core definition is unchanged: at least 90% site occupancy, using the same 20 rarefaction draws at 12,865 reads and detection in at least half of draws. There are 59 core genera shared by all three compartments. Circle areas are schematic.

## Supplementary PMA plot: your version

## Supplementary PMA plot: reproduced from paired data

The nine paired values and three parent-tube means are unchanged. The vector figure has a committed generator and input/output hashes. The caption clarifies the assay, pairing and expected-richness depth of 123,897 reads.
